Brief Synopsis of Presentation:

Shawn Herrera (DOE) - FY2002 DER Call for Projects

Federal funding is available up to \$500,000 to support cost-effective federal projects using Distributed Energy Resources. Through this call, the Federal Energy Management Program will provide subsidies for DER hardware as well as technical assistance.

The generation technology can be any of the following sources, powered by natural gas and/or renewable energy:

- Microturbines
- Advanced industrial turbines

Combined, heat and power systems (CHP)

- Fuel cells
- Hybrid systems
- Natural gas reciprocating engines
- Photovoltaic systems
- Wind energy systems

Selection criteria will be based on cost sharing with project partners and agency support, financial and technical merit, strategic value and showcase potential, the project description, and the project implementation plan.
