ABSTRACT

Environmental surveillance at the Hanford Site, located in southeastern Washington State, is conducted by Pacific Northwest National Laboratory (PNNL), which is operated by Battelle for the U.S. Department of Energy. The data collected provide a historical record of radionuclide and radiation levels attributable to natural causes, worldwide fallout, and Hanford operations. Data are also collected to monitor several chemicals and metals in Columbia River water and sediment. For more information regarding the 2000 sampling schedule for the Surface Environmental Surveillance Project (SESP) and Drinking Water Monitoring Project, refer to L. E. Bisping, Environmental Surveillance Master Sampling Schedule (PNNL-13109, Pacific Northwest National Laboratory, Richland, Washington).

PNNL publishes an annual environmental report for the Hanford Site each calendar year. The Hanford Site Environmental Surveillance Data Report for Calendar Year 2000 describes the site mission and activities, general environmental features, radiological and chemical releases from operations, status of compliance with environmental regulations, status of programs to accomplish compliance, and environmental monitoring activities and results. Sections of the annual environmental report include tables and summaries of offsite and onsite environmental surveillance data collected by PNNL during 2000. This data report contains the actual raw data used to create those tables and summaries. In addition to providing raw data collected during routine sampling efforts in 2000, this data report also includes data from special sampling studies performed by PNNL during 2000.

For further information regarding environmental management activities and compliance issues, refer to T. M. Poston and R. W. Hanf, 2001, Hanford Site Environmental Report for Calendar Year 2000 (PNNL-13487, Pacific Northwest National Laboratory, Richland, Washington), Internet address: <http://hanford-site.pnl.gov/envreport> or <http://www.hanford.gov/docs/annualrp00/index.htm> or contact T. M. Poston, Pacific Northwest National Laboratory, P.O. Box 999, Richland, Washington 99352 (ted.poston@pnl.gov).

INTRODUCTION

The following sections provide tables of data on which PNNL's environmental surveillance summary information in the Hanford Site Environmental Report for Calendar Year 2000 was based. Information that may help the reader to understand these data tables is provided below.

GENERAL

Some degree of inherent uncertainty is associated with all analytical measurements. The total propagated analytical uncertainty for an individual result is 2 sigma counting error. For samples that are prepared or manipulated in the laboratory prior to counting, the total propagated analytical uncertainty includes both the counting uncertainty and the uncertainty connected with sample preparation and chemical separations. For samples that are not manipulated in the laboratory before counting, the total propagated analytical uncertainty only accounts for the uncertainty associated with counting the sample. The uncertainty associated with samples that are analyzed but not counted includes only the analytical process uncertainty.

Soil and natural vegetation samples have been collected on and around the Hanford Site for over 50 years. Data collected since 1971 for the SESP & Drinking Water Projects are retained in the Hanford Environmental Information System (HEIS) database. As a result of the large volume of historical analytical data available, routine soil or natural vegetation sampling are conducted on an as-needed basis in support of site cleanup activities and facility operation and are scheduled for routine collection every 3 to 5 years. There were no routine soil or natural vegetation samples collected by PNNL during 2000, however, PNNL did perform special sampling studies in which soil and natural vegetation samples were collected.

EXTERNAL RADIATION DATA

The thermoluminescent dosimeter (TLD) readings in this data volume are in milliroentgens per day (mR/day) and have been converted to mrem/year for presentation in the annual report.
