ENVIRONMENTAL SURVEILLANCE DATA REPORT

for Calendar Year 2008

DISCLAIMER

This report was prepared as an account of work sponsored by an agency of the United States Government. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof, or Battelle Memorial Institute. This report is a summary of major or significant activities occurring at the Hanford Site only, and is not a full disclosure of all details associated with Hanford-related activities, nor a substitute for legally required information subject to reporting requirements regarding releases, violations, etc.

PACIFIC NORTHWEST NATIONAL LABORATORY
operated by
BATTELLE
for the
UNITED STATES DEPARTMENT OF ENERGY
under Contract DE-AC05-76RL01830

Printed in the United States of America

May be available to DOE and DOE contractors from the
Office of Scientific and Technical Information,
P.O. Box 62, Oak Ridge, TN 37831-0062;
ph: (865) 576-8401
fax: (865) 576-5728
email: reports@adonis.osti.gov

Available to the public from the National Technical Information Service,
U.S. Department of Commerce, 5285 Port Royal Rd., Springfield, VA 22161
ph: (800) 553-6847
fax: (703) 605-6900
email: orders@ntis.fedworld.gov
online ordering: <http://www.ntis.gov/ordering.htm>

The cover photo shows swards of exotic purple mustard (*Chorispora tenella*) and the remains of last year's Russian thistle (*Salsola tragus*) that dominate swales in the Cold Creek Valley burned by past wildfires. At higher elevations on Rattlesnake Ridge, native perennial bunchgrasses persist after being burned and present green slopes during the spring and early summer. Photo is courtesy of S Butner, Pacific Northwest National Laboratory, Richland, Washington. The cover design is by SB Colson, Pacific Northwest National Laboratory, Richland, Washington.

This document was printed on recycled paper.

Hanford Site Environmental Surveillance Data Report for Calendar Year 2008

LE Bisping

September 2009

Prepared for
the U.S. Department of Energy
under Contract DE-AC05-76RL01830

Pacific Northwest National Laboratory
Richland, Washington 99352

Summary

Environmental surveillance on and around the Hanford Site, located in southeastern Washington State, is conducted by Pacific Northwest National Laboratory, which is operated by Battelle for the U.S. Department of Energy. The environmental surveillance data collected provide a historical record of radionuclide and radiation levels attributable to natural causes, worldwide fallout, and Hanford Site operations. Data were also collected to monitor several chemicals and metals in Columbia River water, sediment, and wildlife. For more information regarding the 2008 sampling schedule for the Surface Environmental Surveillance Project and Drinking Water Monitoring Project, refer to *Hanford Site Environmental Surveillance Master Sampling Schedule for Calendar Year 2008* (PNNL-17282).

Pacific Northwest National Laboratory publishes an annual environmental report for the Hanford Site each calendar year. The *Hanford Site Environmental Report for Calendar Year 2008* (PNNL-18427) describes Hanford Site mission and activities, general environmental features, radiological and chemical releases from site operations, status of compliance with environmental regulations, status of programs to accomplish compliance, Hanford Site cleanup and remediation efforts, and environmental monitoring activities and results. Sections of the annual environmental report include tables and summaries of offsite and onsite environmental surveillance data collected by the Laboratory during 2008; this data report contains the actual raw data used to create those tables and summaries. In addition to providing raw data collected during routine sampling efforts in 2008, this report also includes data from special studies performed by the Laboratory during 2008 with support from the Surface Environmental Surveillance Project. In some cases, analytical results may not have been received in time to include in this report, or changes may have occurred to the data following publication.

For further information regarding 2008 Hanford Site environmental management, cleanup activities, and compliance issues, refer to *Hanford Site Environmental Report for Calendar Year 2008* (PNNL-18427), available online at <http://hanford-site.pnl.gov/envreport>, or contact T. M. Poston, Pacific Northwest National Laboratory, P.O. Box 999, MS K6-75, Richland, Washington, 99352 (ted.poston@pnl.gov).

Acronyms

CFS	cubic feet per second

Introduction

The following sections provide tables of raw data used to develop Pacific Northwest National Laboratory's environmental surveillance summary information in the *Hanford Site Environmental Report for Calendar Year 2008* (PNNL-18427). Information that may help the reader to understand these data tables is provided in these introductory pages.

Unless otherwise noted in the tables, General Engineering Laboratories, LLC (GEL) in Charleston, South Carolina, performed the radiological, anions, total organic carbon (TOC) and volatile organic compounds (VOA) analyses. GEL also performed the metals and mercury analyses on the routine soil samples.

The Battelle Marine Sciences Laboratory (MSL), located at the Pacific Northwest National Laboratory Sequim Marine Research Operations in Washington State, performed trace metals and mercury analyses for water, biota, and sediment. MSL also performed trace metals and mercury analyses on nine routine soil samples (Table S-1).

General Information

Some degree of inherent uncertainty is associated with any analytical measurement. The 2-sigma counting error captures the uncertainty associated with the counting of radiological emissions and sample counting geometry. For samples prepared or manipulated in the laboratory before counting, the total analytical error includes both the counting error and the uncertainties connected with sample preparation and chemical separations. For samples that are not manipulated in the laboratory before counting, the total analytical error only accounts for the uncertainties associated with counting the sample and weighing the sample. The uncertainty associated with samples that are analyzed but not counted includes only the sample preparation and chemical-separations uncertainties.

Column Headings and Heading Definitions

With the exception of Tables W-1, W-2, Q-1 through Q-5 and Q-11 through Q-12, the data tables in this document were retrieved from the Hanford Environmental Information System (HEIS 1989) database, a repository for data gathered during environmental surveillance activities at the Hanford Site. Excluding the non-HEIS columns "Replicate ID," which appears in Table Q-6, and "Relative % Difference," which appear in Tables Q-6 through Q-10, the column headings are presented as they appear in the HEIS database. The following are definitions for these column headings.

Column Heading	Definition
ANAL UNITS RPTD	Analytical units reported are the units in which the value reported was originally reported.
COLL MTHD	Collection method used to denote the type of method used for surface water collections: <ul style="list-style-type: none"> FILTER Filter material of cloth or paper. RESIN Resin material for collecting cations and anions from water. TRANSECT Water collected on a line cross-river and near-shore locations.
CON SHORT NAME	Constituent short name for the specific radiological or chemical compound, or physical parameter.
COUNTING ERROR	The 2-sigma counting error for radioanalytical results only.
DIST CLASS	Distance classification is the location of the sampling site relative to the Hanford Site (Onsite [site-wide], Offsite, Community, Distant, Perimeter, River_Shoreline).
FILTERED FLAG	Filtered flag is only applicable to surface-water samples. The field is set to “Y” (Yes) if the sample was filtered at the time of collection, and “N” (No) if the sample was not filtered at the time of collection.
FLOW RATE	Columbia River daily average flow below Priest Rapids Dam.
FLOW RATE UNITS	Columbia River flow in cubic feet per second (CFS).
LAB CODE	The unique code for the laboratory that performed the analysis.
LAB QUALIFIER	Laboratory qualifier identifies issues that could impact the quality of the value reported. Qualifiers that apply to the 2008 data include the following: <ul style="list-style-type: none"> * For inorganics the duplicate analysis was not within control limits. B For inorganics, the analyte was detected at a value less than the contract required detection limit (RDL), but greater than or equal to the instrument detection limit (IDL) or method detection limit (MDL). For organics, the analyte was detected in both the associated quality control (QC) blank and in the sample. BCX Characteristics from “B,” “C,” and “X” qualifiers all exist. BD Characteristics from “B” and “D” qualifiers both exist.

Column Heading	Definition
LAB QUALIFIER	BDN Characteristics from “B,” “D,” and “N” qualifiers all exist
	BX Characteristics from “B” and “X” qualifiers both exist.
	BYX Characteristics from “B” and “YX” qualifiers all exist.
	C For inorganics, the analyte was detected in both the sample and the associated QC blank.
	CDN Characteristics from “C,” “D,” and “N” qualifiers all exist.
	CX Characteristics from “C” and “X” qualifiers both exist.
	D Analyte was reported at a secondary dilution factor, typically DF>1 (i.e., the primary preparation required dilution to either bring the analyte within the calibration range or to minimize interference). Required for organics/wet chemistry if the sample has been diluted.
	D* Characteristics from “D” and “*” qualifiers both exist.
	D*E Characteristics from “D,” “*,” and “E” qualifiers all exist.
	D*N Characteristics from “D,” “*,” and “N” qualifiers all exist.
	DE Characteristics from “D” and “E” qualifiers both exist.
	DN Characteristics from “D” and “N” qualifiers both exist.
	E INORGANICS - Reported value is estimated because of interference. See comment on cover page, hard copy case narrative, or specific inorganic hardcopy data sheet. ORGANICS - Concentration exceeds the calibration range of the GC/MS.
	N Spike and/or spike duplicate sample recovery is outside of the control limits.
	U Indicates constituent was analyzed for but not detected above limiting criteria that may be any of the following: value reported <0; value reported < counting error; value reported < total analytical error; value reported <= contract MDL, IDL, minimum detectable activity (MDA), or practical quantitation limit (PQL). When another qualifier accompanies a “U” qualifier, the result is always considered non-detected.
	UD Characteristics from “U” and “D” qualifiers both exist.

Column Heading	Definition
LAB QUALIFIER	<p>UDN Characteristics from “U,” “D,” and “N” qualifiers all exist.</p> <p>UN Characteristics from “U” and “N” qualifiers both exist.</p> <p>UX Characteristics from “U” and “X” qualifiers both exist.</p> <p>X Specific information associated with the reported value is provided in the hard copy data report and/or case narrative provided by the analytical laboratory and retained by the respective project. Additional information may also be found in the RESULT COMMENT field.</p> <p>YX Characteristics from “X” qualifier exist; “Y” see case narrative, confirmed by second analysis.</p>
MEDIA	<p>Categorizes samples into logical media groups or subject areas:</p> <p>AT Air</p> <p>BI Biota (foodstuffs, wildlife)</p> <p>SO Soil/sediment</p> <p>SW Surface water (also represents water collected from rivers, ponds and springs, and drinking water).</p>
MIN DETECTABLE ACTIVITY	MDA is assumed to be a sample-dependent estimate, typically dependent on the background counts measured by the analytical instrument and sample yield, reported in the same units as the value reported.
OWNER ID	Owner ID identifies the owner of the data (SESPMNT = Pacific Northwest National Laboratory SESP routine collection, SESPSPEC = Pacific Northwest National Laboratory SESP special study).
RELATIVE % DIFFERENCE	<p>The relative percent difference between the value reported and the value reported for the replicate sample. The formula is as follows:</p> $100 * (\text{VALUE RPTD} - \text{REPLICATE VALUE}) / ((\text{VALUE RPTD} + \text{REPLICATE VALUE}) / 2)$
REPLICATE ID	Replicate identification identifies the primary (routine) sample number.
RESULT COMMENT	Result comment contains pertinent information about a result.
SAMP COMMENT	Sample comment contains pertinent information about a sample.
SAMP DATE	Sample date is the date the sample was collected (may also be referred to as SAMP DATE TIME).
SAMP DATE TIME ON	The sample is collected over an interval of time. This is the date and time that the sample collection was started.

Column Heading	Definition
SAMP FROM	Sample from identifies the media-dependent entity that was sampled (e.g., COW, WINE, BASS, etc.).
SAMP ITEM	Sample item identifies the media-dependent item (e.g., MILK, RED WINE, MUSCLE, etc.) that was sampled from the entity identified in the SAMP FROM column.
SAMP NUM	Sample number is a unique identifier for a sample.
SAMP SITE NAME	Sample site name is the name describing the sampling site and appears exactly as it is identified in the HEIS database.
TAG ID	Tag identification is a unique identifier used to group the different tissues collected from a single biota sample. For example, a single-tag identification would be used to group the muscle and liver samples collected from a single fish. The tag identification is computer generated, incorporating the sample year, type of sample planned for collection along with a consecutive number (i.e., 2008CARP1, 2008CARP2, etc.). If the planned sample is unavailable, an approved substitution may be collected (i.e., sucker). Because the tag identification is computer generated based on what was planned for collection, it is not modified to reflect what was actually collected. Refer to the SAMP FROM field to locate the type of sample actually collected.
TOTAL ANAL ERROR	The 2-sigma total analytical error may be reported for any result.
VALUE RPTD	Value reported is the concentration reported by the analytical laboratory or field parameters obtained during the collection of the sample.

(a) Three results are reported to ERA, this value represents the average of the three results \pm 1 standard deviation of the mean.

(b) Known concentration determined by ERA as mean \pm 1 standard deviation.

(c) The Performance Evaluation criteria is:

Acceptable = GEL value falls within the Acceptance Limits.

Not Acceptable = GEL value falls outside of the Acceptance Limits.

The Control Limits are defined in the U.S. Environmental Protection Agency (EPA) guidelines contained in the *National Standards for Water Proficiency Testing Studies Criteria Document* (NERL-Ci-0045), December, 1998 and the National Environmental Laboratory Accreditation Conference (NELAC) Proficiency Testing Program as applicable.

Table Q-3. General Engineering Laboratory (GEL), Charleston, South Carolina, Chemical Performance Data
Results on Environmental Resource Associates (ERA) Proficiency Testing Program Samples, 2008

Water	DMR-QA 28	Settleable Solids	20	19.8	mL/L	15.2 - 25.6	Acceptable

(a) Accepted value by ERA. A parameter not added to the standard was assigned a value of zero.

(b) The Performance Evaluation criteria is:

Acceptable = GEL value falls within the Acceptance Limits.

Not Acceptable = GEL value falls outside of the Acceptance Limits.

The Control Limits are defined in the U.S. Environmental Protection Agency (EPA) guidelines contained in the *National Standards for Water Proficiency Testing Studies Criteria Document* (NERL-Ci-0045), December, 1998 and the National Environmental Laboratory Accreditation Conference (NELAC) Proficiency Testing Program as applicable.

(a) The performance evaluation criteria are:

Acceptable - Bias \leq 20%

Acceptable with Warning - 20% < Bias \leq 30%

Not Acceptable - Bias > 30%.

(b) The performance evaluation criteria are:

Gross Alpha, Acceptable - Bias $\leq \pm$ 100% with a statistically positive result at two standard deviations (Result/Uncertainty > 2, i.e., the range encompassing the result, plus or minus the total uncertainty at two standard deviations, does not include zero).

(c) The performance evaluation criteria are:

Gross Beta, Acceptable - Bias $\leq \pm$ 50% with a statistically positive result at two standard deviations (Result/Uncertainty > 2, i.e., the range encompassing the result, plus or minus the total uncertainty at two standard deviations, does not include zero).

(d) The MAPEP-08-GrW19 water standard was designed to test the Safe Drinking Water screening levels of 0.56 Bq/L (15 pCi/L) for gross alpha and 1.85 Bq/L (50 pCi/L) found in 40CFR141. Laboratories reporting values less than or equal to these screening levels were found to be Acceptable (A).

(a) The Performance Evaluation criteria are:

Acceptable - Reported Value falls within the control limits

Not Acceptable - Reported Value falls outside of the control limits.
