Pacific Northwest National Laboratory Regional Populations – 2020 Census

Richland Campus and Sequim Campus

February 2023

SA Rose
JD Tagestad
SF Snyder

Prepared for
the U.S. Department of Energy
under Contract DE-AC05-76RL01830

Pacific Northwest National Laboratory
Richland, Washington 99354

Summary

The U.S. Department of Energy conducts radiological operations in south-central (Richland) and northwestern (Sequim) Washington State. Collective dose estimates to regional populations must be performed to provide a measure of the impact from site radiological releases. Results of the U.S. 2020 Census and, for the Sequim location only, the Canada 2021 Census, were used to determine counts and distributions for the residential population located within 50 miles (80 kilometers) of the Pacific Northwest National Laboratory Richland Campus and the Sequim Campus. Since the 2010 Census, total regional populations increased 25–40 percent. This revision updates and expands the data presented in the prior report by the addition of PNNL-Richland Campus population distribution information.

Acronyms and Abbreviations

1.0 Introduction

The 2020 U.S. Census data (Census 2021a, 2021b) were used to estimate the 50-mile (80-km) residential population data relative to the U.S. Department of Energy, Office of Science, Pacific Northwest National Laboratory (PNNL) Richland Campus and Sequim Campus (Figure 1.1) in Washington State. The 50-mile population data are developed specifically for determining collective dose from radioactive material emissions to air. Only the PNNL Richland and Sequim locations are permitted for such radioactive material emissions in air effluent.

The PNNL-Richland Campus collective dose assessments previously used Hanford Site 300 Area centroid population data (e.g., Hamilton and Snyder 2011) because of its close proximity, adjacent to the north. The PNNL-Sequim Campus collective dose assessments previously used Zuljevic et al. (2016) population data. The Canadian border is 20 mi (32 km) from the PNNL-Sequim Campus. Both 2020 US Census (Census 2021a, 2021b) and 2021 Canada Census (Statistics Canada. 2021a, 2021b) data were used to determine the 50-mile distributions from the PNNL-Sequim Campus.

As in prior population assessments, for this 2020 Census report, the population within 50-miles is provided for a radial grid of 160 segments centered on a location central to Campus radiological operations. Figure 1.2 indicates the Richland Campus location and county borders with the 50-mile grid centered on the Physical Sciences Facilities (PSF) where the major emission units are located. Morrow and Umatilla Counties are in Oregon. All other counties are in Washington. Figure 1.3 indicates the Sequim Campus location and county/country borders with the grid centered on laboratory operations.

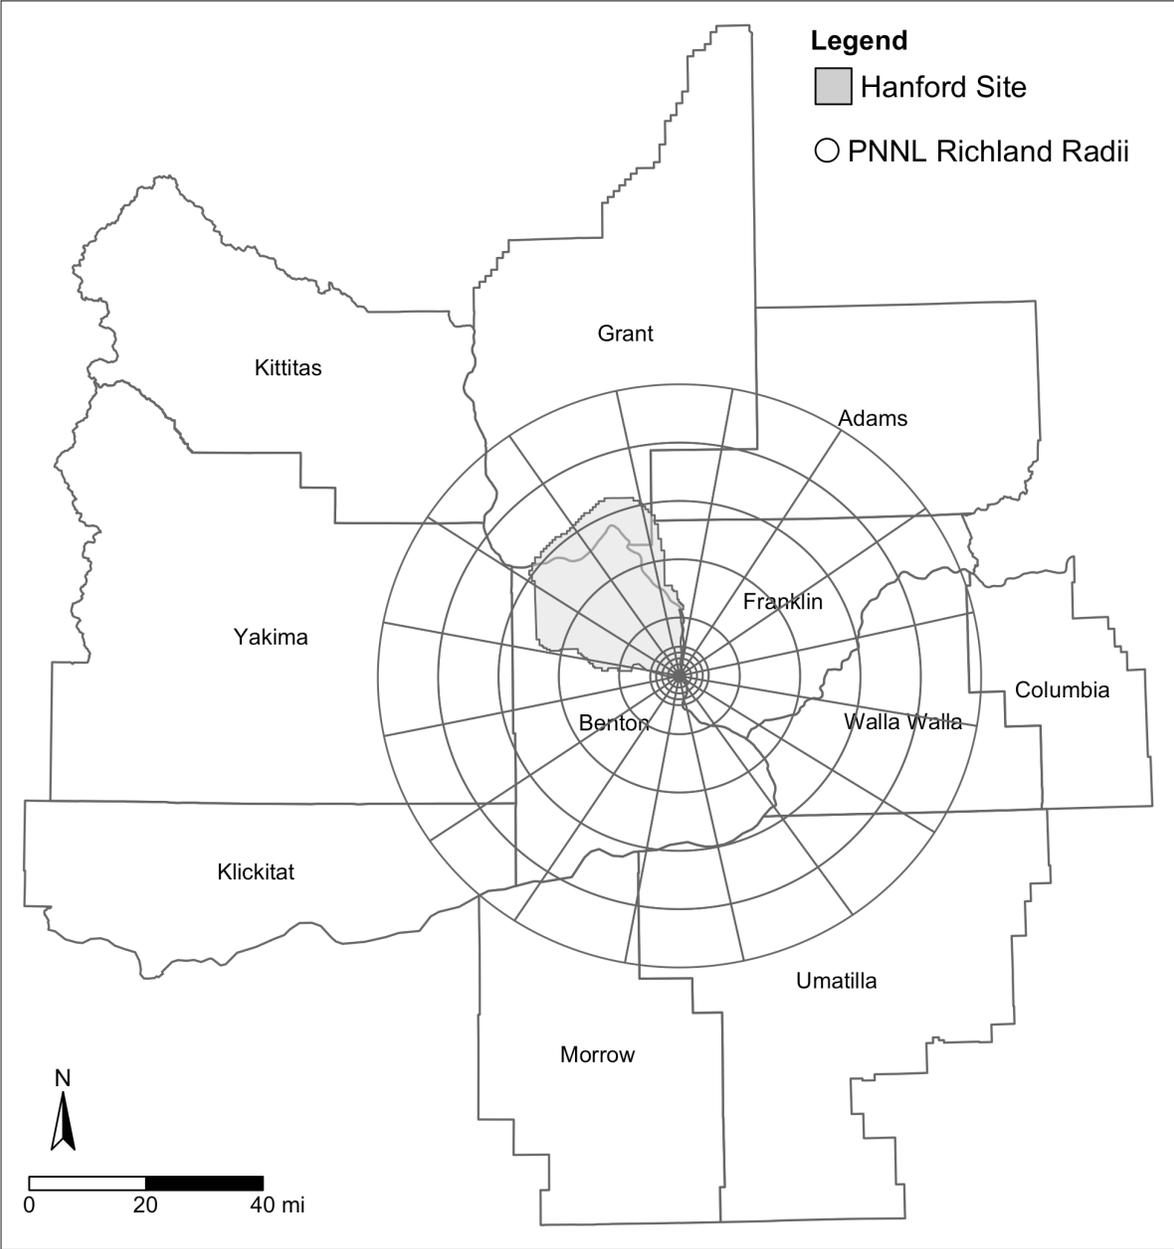

Figure 1.2. PNNL-Richland Campus 50-mile Region and County Overlay.

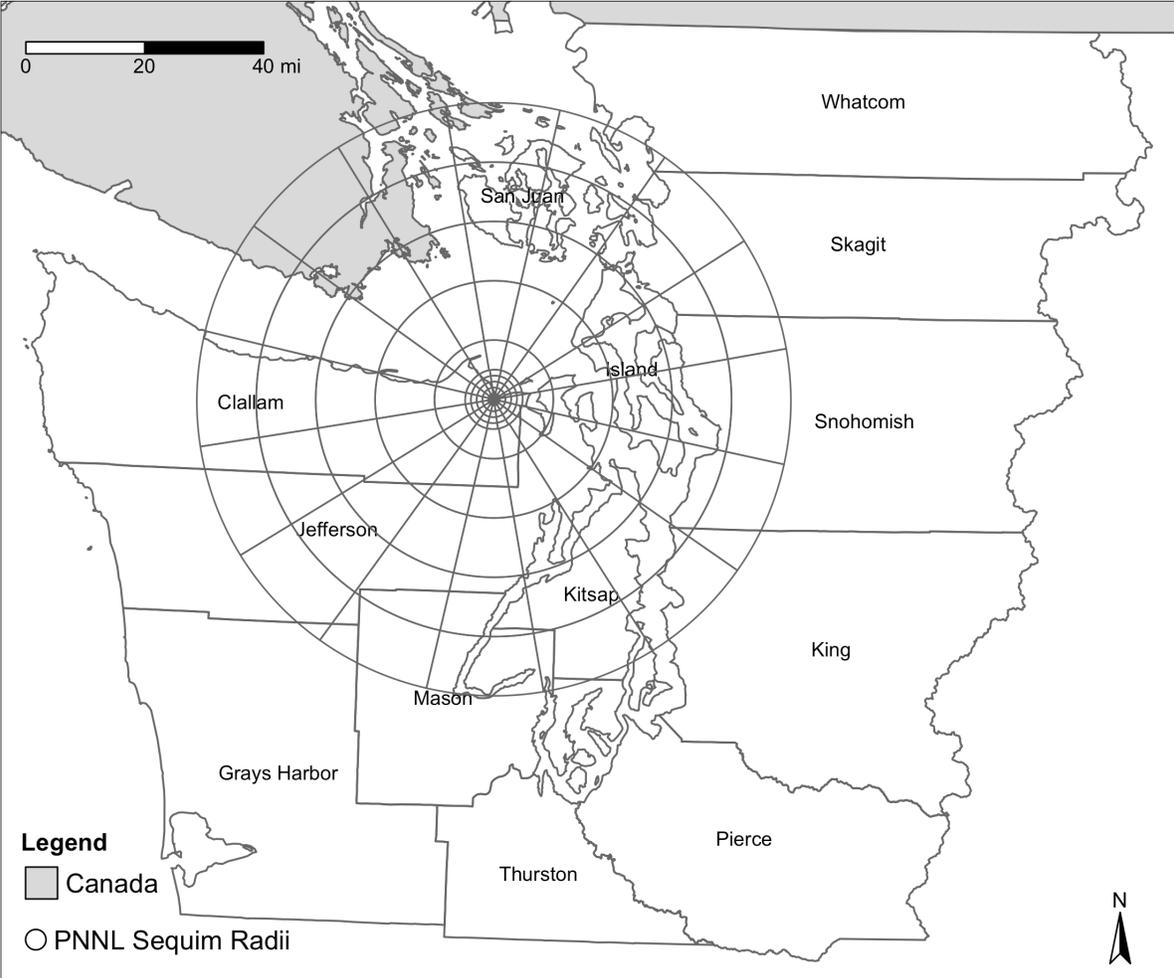

Figure 1.3. PNNL-Sequim Campus 50-mile Region and County Overlay.

2.0 Data Evaluation

Statistical software, R (R Core Team 2022), with Geographic Information Systems (GIS) packages, sf (Pebesma 2018), tigris (Walker 2022), tmap (Tennekes 2018), ggplot2 (Wickham 2016), and tidycensus (Walker and Herman 2022), were used to create direction- and distance-specific circular grids centered at PSF on the PNNL-Richland Campus and at a central emission location at the PNNL-Sequim Campus. The grids contained concentric circles with radii of 1, 2, 3, 4, 5, 10, 20, 30, 40, and 50 miles, expanding from the central point.

The 16 directional sectors of the grid were created using the four cardinal directions (N, E, S, W), the four ordinal directions (NE, SE, SW, NW), and the eight half-wind directions (NNE, ENE, ESE, SSE, SSW, WSW, WNW, NNW). The 10 concentric distance circles were then combined with the 16 directional sectors to create a circular grid with 160 sections (See Figure 1.2 and Figure 1.3).

Table 2.1 Locations of Radial Grid Center

PNNL Campus	Longitude	Latitude	State Plane X (meters)	State Plane Y (meters)
Richland	-119.27713	46.352244	594113.4	113980.9
Sequim	-123.04665	48.078368	335113.4	122266.6

In order to determine the population totals for each circular grid section, Census 2020 Tiger/Line block-level shapefiles containing Census 2020 Redistricting population totals (Census 2021a, 2021b) were brought into R via Census application programming interface (API) accessing packages tidycensus and tigris (Walker 2022, Walker and Herman 2022). Canadian Census population totals and geographic attribute files were loaded in manually to RStudio downloaded from the Statistics Canada website (Statistics Canada, 2021a, 2021b). Canada Census population totals were bound to U.S. Census totals and arranged by unique geographic identifier code. The area was calculated for each block and the population was assumed to be evenly distributed within that area. Then the block-level boundaries were intersected with the circular grids. The area was again calculated for the newly intersected blocks. To calculate a new population for each of the 160 grid segments, the areas for the block portions within a grid were multiplied by their respective original average census block population densities, then summed and rounded to the nearest whole number. For example, if a circular grid section contained 40% of the original area of a block, then it was assumed that the section also contained 40% of the block's original population. This procedure was repeated for grids centered at each location of interest to create the 50-mile (80-km) population distribution based on the census data used. See Sections 3.1 and 4.1 for census block overlays with the 50-mile radial grid. All circular grids, census blocks, and site centroids were projected to NAD83 Washington State Plane South (EPSG:32149) prior to analysis.

3.0 PNNL-Richland Campus

The PNNL-Richland Campus grid and census block overlay is presented, as well as data analysis results in grid and tabular forms. The 2020 U.S. Census data were used for locations within 50-miles of the Campus. The user can then format the population distributions, as needed, for a particular application. The centroid location for the PNNL-Richland Campus 50-mile grid is indicated in Figure 3.1. The remainder of this section presents various figures and tables associated with the geographic context and population distribution results.

H = Includes sizable areas of the Hanford Site.

4.0 PNNL-Sequim Campus

The PNNL-Sequim Campus grid and census block overlay is presented, as well as data analysis results in grid and tabular forms. The 2020 U.S. Census data and the 2021 Canada Census data were used for appropriate locations within 50-miles of the Campus. The user can then format the population distributions, as needed, for a particular application. The centroid location for the PNNL-Sequim Campus 50-mile grid is indicated in Figure 4.1. The remainder of this section presents various figures and tables associated with the geographic context and population distribution results.

Bold values include Canadian populations.

"-" = sea locations in the Strait of Juan de Fuca

(*) Predominantly a sea location but also contains some land.

(a) This WNW sector includes both Canadian and American populations. Fewer Canadians (55) and more Americans (218) are attributed to this sector.

(b) This WNW sector includes both Canadian and American populations. Fewer Americans (4) and more Canadians (10530) are attributed to this sector.

(c) This NNW sector includes both Canadian and American populations. Fewer Americans (15) and more Canadians (122709) are attributed to this sector.

(d) This N sector includes both Canadian and American populations. Fewer Canadians (1150) and more Americans (4145) are attributed to this sector.

(e) This NNW sector includes both Canadian and American populations. Fewer Americans (31) and more Canadians (43479) are attributed to this sector.

ONP/NF = Contains sizable areas of Olympic National Park or Olympic National Forest.

Bold names are Canadian (British Columbia) cities.

“Sea” indicates sectors that are predominantly or all marine environments (i.e., some sectors may have small land masses such as an island in them).

Orange sectors contain portions of Canada.

5.0 Notes on Data Use

The data presented in this report strictly follow the evaluation procedure described, with only the adjustments indicated in Section 4.2 performed. The process of averaging populations over the census block area may indicate the presence of a residential individual where none exists, or no individuals where one does exist. In addition, census data may not be complete for some census blocks due to collection issues within the U.S. or Canada Census. These are important factors to consider, especially for dose calculations at distances in closer proximity to an emission source. Furthermore, census counts were collected at two different points in time, 2020 for the U.S. and 2021 for Canadian Census. Thus, while both sources represent the most recent comprehensive counts, they offer two different point-in-time counts.

6.0 Summary of Population Data

6.1 PNNL-Richland Campus

The PNNL-Richland Campus Physical Sciences Facility 50-mile centroid had a 2020 Census population of 605,419. This count is similar to the 2020 Census population from the Hanford Site, 300 Area 50-mile centroid of 609,715 (Rose et al. 2022).

Table 6.1 Trends for PNNL-Richland Campus 50-mile Population

Centroid	2010 Census	2020 Census	Year 2010 to 2020 Change
Hanford Site, 300 Area ^(a)	432,117	609,715	41% increase
PNNL-Richland Campus, PSF	432,117 ^(b)	605,419	40% increase

(a) Hanford Site: 2010 data from Hamilton and Snyder (2011); 2020 data from Rose et al. 2022.
 (b) Hanford Site, 300 Area data used in lieu of non-specific data.
 PSF = Physical Sciences Facilities

6.2 PNNL-Sequim Campus

The 50-mile PNNL-Sequim Campus centroid for the 2020¹ Census resulted in a population of 2,936,686. This is a 25% increase from Zuljevic et al. (2016) 2010 Census population of 2,349,091.

Table 6.2 Trends for PNNL-Sequim Campus 50-mile Population

Centroid	2010 Census ^(a)	2020 Census	Year 2010 to 2020 Change
PNNL-Sequim Campus	2,349,091	2,936,180	25% increase

(a) Zuljevic et al. 2016

¹ While 2020 Census is indicated, the data includes 2021 Canadian Census information.
