Anmol Srivastava

University of Washington

National Security Directorate Graduate Student

What is your research area/what are you working on at PNNL?

Investigating the transfer of adversarial examples among machine learning models, in similar and dissimilar domains.

Why did you choose PNNL?

I had not experienced a national laboratory setting before, and also wanted to learn about how research is conducted in the machine learning space.

What are you most excited to learn at PNNL?

How machine learning researchers build, pick apart, and evaluate models for diverse, complex tasks.

Are you working virtually? What is it like to work virtually this summer?

I'm working remotely from home at Maryland, and it's nice to have greater flexibility in terms of hours and commuting.

What do you enjoy doing in your free time?

Badminton! I've also started reading again.

What is your dream job? Why?

Machine Learning Researcher/Data Scientist in a public service role, so I can feel like my work is having a meaningful impact on everyday people.
