Pacific Northwest
NATIONAL LABORATORY

Anna Jarman

Carroll College
Tech Student

What is your research area/what are you working on at PNNL?

I'm working with the Applied Statistics and Computational Modeling group with Robert Brigantic. Most of our projects are related to risk modeling and optimization.

Why did you choose PNNL?

I grew up in Richland, so I knew PNNL was a world-class laboratory. I'm really eager to start getting some real-world experience and build up a good resume.

What are you most excited to learn at PNNL?

I'm most excited to learn higher-level math that's applicable to the real world.

What do you enjoy doing in your free time?

I enjoy hiking, baking, reading classics, crocheting, and I especially love to play tennis and ultimate frisbee.

What is your dream job? Why?

My dream job is an FBI special agent or intelligence analyst. I've always been fascinated with criminal investigations (I listen to true crime and watch detective shows a lot), and I can't stand not understanding something, I always have to ask questions. Solving problems and uncovering mysteries sounds like the perfect thing for me.
