

DEM file

Required:

Always

Name:

User-specified

Read by:

`InitTopoMap()`

Format:

2D Matrix

Purpose:

Contains a digital elevation model of the basin area, with heights in meters

Details:

- If the `format` is `BIN` or `BYTESWAP`, then a `float` should be used.
- If the `format` is `NetCDF`, then `NC_FLOAT` should be used and the variable name in the NetCDF file should be `Basin.DEM`.
- The DEM is masked based on the content of the mask file.
