Tech Student

What is your research area/what are you working on at PNNL?

At PNNL I am working on improving my skills with useful programs like Docker and the ELK (Elasticsearch and Kibana) stack.

Why did you choose PNNL?

I chose PNNL because I was recommended by multiple sources to apply and PNNL seemed like a really good fit for me.

What are you most excited to learn at PNNL?

I'm excited to learn Docker and the ELK stack. Sure, I could spin up the services on my own network, but there is nothing that really compares setting up Docker containers and building an ELK stack from the ground up.

Are you working virtually? What is it like to work virtually this summer?

I am working virtually this summer. Although not ideal, PNNL has done a great job of making the process extremely smooth.

What do you enjoy doing in your free time?

During my free time I love to read, play video games with my friends, and compete in Capture the Flag competitions.

What is your dream job? Why?

Definitely something in cybersecurity, but I haven't really decided if I want to be offensive, defensive, or both.
