

PRISM files

Required:

Required when `PRISM = TRUE`.

Read by:

`InitNewMonth()`

Format:

2D Matrix

Purpose:

Contains PRISM precipitation map for each month (precipitation in mm*100).

Comments:

File names are expected to be of the format:

`<PRISM data path>.xx.<PRISM data extension>`,

where `xx` is a 2-digit integer indicating the month (use a leading zero for number smaller than 10)

Details:

- If the format is `BIN` or `BYTESWAP`, then a `float` should be used.
- If the format is `NetCDF`, then `NC_FLOAT` should be used and the variable name in the NetCDF file should be `PRISM.Precip`.
- The PRISM files are masked based on the content of the mask file.
