

Travel time file

Required:

Required when no stream network is specified.

Name:

User-specified

Read by:

```
InitUnitHydrograph()
```

Format:

ASCII

Purpose:

Map with travel time class from each pixel to the outlet. This allows a distributed unit hydrograph approach instead of explicit routing. The travel time classes correspond to the unit hydrographs specified in the unit hydrograph file.

Details:

- If the format is `BIN` or `BYTESWAP`, then an `unsigned short` should be used.
- If the format is `NetCDF`, then `NC_SHORT` should be used and the variable name in the NetCDF file should be `Travel.Time`.
